

## The 100% Solution Maximize Performance of your CMM

P/N- 480-5039

**The Number One cause of down time and repair is oil and contamination from your compressed air system. It causes fouling of the air lines and air bearings inside your CMM.**

- Reduce down time and expensive repairs
- Maintain accuracy
- Complete system installs in minutes
- First stage removes water and oil down to 10 micron
- Second stage oil coalescer removes oil mist and aerosol down to .01 micron
- Third stage removes oil vapor/smell down to .002 micron
- Single programmable auto drain ejects oil and water
- Lowest pressure drop of any filter package (1.8 psid)
- Micro-flex element capacity 3 times larger (Efficiency: Dry 99.949 Saturated 99.920)
- Grade "D" instrument air meets HEPA air quality standards
- Port size 1/2 npt : max pressure 250 psi : 50 scfm

- \* **First stage Stainless Steel Element Never Needs Changing**
- \* **Second & Third Stage Elements: Change Every 6 Months, Under Normal Conditions.**
